ESD-SAFE GROUNDING CABLE

Grounding connection cable 4,5 mt long.
This cable is an antistatic component used to safely connect components in a protected area. It channels towards ground ESDs protecting personnel and sensitive devices from damage. The 4,5 mt grounding wire has a banana/crocodile terminal and at the other end a male poussoir 10mm button with a 1MΩ resistance.
In the electronic field, this cable is often used to connect the ESD-SAFE mat to the grounding node.
