

ECO ESD-SAFE TABLE WITH TOOLHOLDING SHELF

The ECO line workbench with toolholding shelf is practical and sturdy. It has a laminated steel frame coated with a layer of epoxy powders with Grey RAL7035 colouring. This model has been built with antistatic dissipative materials not subject to wear over time. It doesn't allow the generation of electrostatic charges due to the triboelectric effect, completely nullifying charges either produced by rubbing or carried by the user. The structure is completed by a square 40x40mm section. The ground clearance is 810mm. The workbench has rounded angles.
