## FORCED VENTILATION OVEN

Ovens can be employed to put under stress an electronic circuit or to dry a board that has been cleaned with solvents. In other fields it can also be used as a dryer. Thanks to the forced ventilation, hot air is evenly distributed inside the chamber reaching up to 280°C.

### Technical specifications:

- Stainless steel inner structure with rounded corners
- Stainless steel outer structure
- Polyurethane thermal insulation
- Inner ventilation
- Temperature up to +280°C
- Equipped with thermostat
- Inner anti tipping steel shelves adjustable in height
- Vent with manual airflow adjustment
- Heating elements not in contact with the inner chamber
- General bipolar switch with light indicator
- Class 2, DIN 12880
