

KB EVO HIGH 1500 ESD WORKBENCH

The KB EVO HIGH 1500 ESD workbench has an incredibly sturdy and robust structure, allowing it to withstand load higher than **300kg**. This model is the choice due to all of its add-ons: A shelf with quick adjustment, an electric module with 6 schuko sockets and a LED illumination module. The workbench is built with antistatic dissipative materials not subject to wear over time that do not allow the creation of electrostatic charges thanks to the triboelectric effect. It completely and permanently nullifies electrostatic charges produced by rubbing or carried by a worker. The working surface is made of anti-scratch laminate with black 27mm thick ABS borders. The ground clearance is 800mm. Thanks to 6 millimetrically adjustable feet the workbench can always be levelled.

Equipment:

1950mm high upright supports with a rapid attachment shelf, an electric module with 6 schuko powersockets with a magnetothermic switch and a LED 4200K illumination module. The columns offer the option to add various accessories.
